About this Course:

Join us in a beautiful Savannah, Georgia setting to learn about musculoskeletal ultrasound principles and operation including presentations of proper scanning techniques with demonstrations of those techniques. You’ll be thoroughly engaged in lectures, hands-on workshops and open-scanning sessions with faculty. This hands-on workshop offers two concurrent tracks based on your experience level. You’ll learn in an interactive and practical format with the direct supervision of our knowledgeable and experienced faculty.

Along with a review of sonographic imaging of normal anatomy, there will be a review of pathology encountered followed by hands-on instruction in scanning. To complete the course, interventional techniques will be discussed and demonstrated in a hands-on lab. The combined 3-day program provides a powerful learning experience where you will improve your technical competency and patient outcomes.
