- Pre-exam communication
- Explanation of procedure
- Patient assessment
 - provide emotional and psychological support
 - better care through understanding verbal and non-verbal cues
- Q&A - instructor led discussion

Mammographic Positioning Methods

- Screening
- Diagnostic
- Positioning of CC & MLO
 - accommodations for equipment design
- Q&A - instructor led discussion

Quality Assurance through Image Evaluation

- ACR - Eight Image Criteria
 - positioning
 - compression
 - exposure
 - contrast
 - sharpness
 - noise
 - artifacts
 - exam identification
- FDA / MQSA Regulations

Special Needs Imaging

- Post-surgical breast
- Irradiated breast
- Implants
- Kyphotic patients

About the Program

Patient satisfaction has gained immeasurable attention recently, and is linked to insurance reimbursement plus patient volume in an imaging center. By understanding how to keep technologists engaged/passionate about their job and key factors in patient care, patient-perceived proficiency of care can be altered. With increased satisfaction during imaging, patients are more willing to return for recommended annual examinations, and follow physician direction for breast health. Mammographic positioning is an art, which routinely requires updated proficiency. Innovations in imaging equipment require technologists to adjust the methods originally learned for more updated processes. This knowledge will gain patients' confidence and assist in providing comfort during their visits to the imaging center.
